Freedom Paws Wellness LLC

Valuation and Income Plan. November 7, 2026.

A fresh planning model for the next five years. The operating plan is written month by month for three years. Valuations are stated every six months for three years and, separately, for five years.

1. How to read this

This plan was built on November 7, 2026 from the product as it exists in the application, the posted terms, and two operating constraints. One founder does the work. Discretionary spending on tools, legal, insurance, bookkeeping, and ads stays at or under $1,500 a month until the business can fund more out of profit. The company is pre-revenue. This plan relies on no waitlist, no signed affiliate contract, and no paying user.

Earlier business plans and financial models were not used. Where this document disagrees with an older projection, operate from this document until the monthly results replace it.

Three results are shown. The planning case is the path the task list is built to hit. The downside case cuts new members in half, cuts the affiliate rate in half, and delays paid shelters by six months. A third view keeps demand and cuts annual renewal from 60 percent to 45 percent. All three are arithmetic from stated assumptions. None of them is a promise, an appraisal, or tax advice.

Dollars in the monthly tables are the model's own arithmetic, rounded to the nearest dollar. Valuation figures are rounded to the nearest thousand after the starting date, because the inputs are assumptions. The thousands are the part that matters.

2. Verdict

On November 7, 2026 Freedom Paws Wellness LLC is a pre-revenue Wyoming limited liability company with a broad, working web application and no customers. The planning value today is **$80,000**. That is $75,000 for a focused replacement of the product that already works, plus $5,000 of starting cash this model assumes is in the operating account. A range of $50,000 to $150,000 is defensible. A multi-million figure is not, until recurring revenue exists.

The application can become a multi-million-dollar asset. The engine is an annual owner membership, affiliate commissions on food and supplements the company already knows how to qualify, and a small shelter software seat that also feeds new owners into the free scan.

In the planning case:

- First cash is December 2026.
- Cash operating profit, with the founder unpaid, starts the same month, because the annual fee is collected up front and a scan costs cents.
- Economic profit, after a $6,000 monthly charge for founder labor, starts in year 2.
- Equity value crosses $1 million at month 30, April 2029.
- Equity at month 36, October 2029, is about **$1,626,000**. About $1,273,000 of that is the operating business. About $354,000 is cash left in the company.
- Equity at month 60, October 2031, is about **$4,962,000**. About $3,346,000 is the operating business. About $1,616,000 is retained cash.

If demand comes in at the downside pace, equity is about $1,069,000 at month 48 (October 2030) and about $1,742,000 at month 60. The asset still gets there. It gets there about a year later, and the bank account is much thinner. That is the case to survive. The planning case is the case to execute.

The price live in the app today, $18 for lifetime access to one protocol, does not support this outcome. Under the same first-year traffic that price produces a few thousand dollars and no renewal base. Section 12 shows the figures. The task list in this plan replaces that price before any ad dollar is spent.

3. What was evaluated

Freedom Paws Wellness LLC is a dog-owner wellness application. The public promise is owner education. A photo and symptom scan points to lifestyle protocols. Nutrition and household guidance, a pet record, and a biometric identification pilot sit beside it, aimed at getting lost dogs home. The posted terms are part of the product. The company is not a veterinary clinic. The scan is not a diagnosis. The protocols are not treatment. The audience is adults in the United States. That boundary is a commercial fact. Partners, insurers, and a future buyer will read it. This plan stays inside it.

The built surface is wide. A visitor can run ViT diagnostics, read ten long-form protocols, open a token shop, enroll a dog in Freedom Paws ID, keep a vault with records and gait clips, share a time-limited consult packet with a veterinarian, scan a food label, follow a training week, and read a hazard list. There is a photo booth and a bring-your-own-camera monitor guide. Shelters in a Tennessee pilot can manage adoption listings. An internal office runs a vendor ledger and a studio desk. A ViT Pro area exists for an allow-listed advisor and is marked as foundation work.

The commercial machinery behind that surface is thin. This is the fact that sets today's valuation.

- The token shop prices each protocol at $18, with 25 XRP only as a fallback when a live rate is missing. The protocol essays are already public. Paying sets a flag. It does not unlock hidden clinical content.
- That flag is stored in the browser. A second phone does not see the purchase. A card return can set the flag from the success URL. There is no payment webhook writing a server entitlement. Until that exists, ad spending does not buy a durable customer.
- Affiliate, insurance, and telehealth modules are built and dark. Links stay off until a partner URL exists and the company bank can receive a commission. The vendor ledger already lists the brands and a cap of five outreach moves a week. None of those contracts is signed.
- Photo booth credit packs are priced at $2.99, $6.99, and $14.99, and the purchase path says coming soon. The costume feature calls a paid image model. Leaving the purchase off is the profitable choice at this size.
- There is no membership, no shelter invoice, and no clinic invoice in the billing code.
- ViT, the vault, the label scan, and the training week are free. Every free scan has an OpenAI cost. With no cap, a busy week can cost more than the shop brings in.

The data that could hold a buyer later is real and mostly empty: pet profiles, biometric enrollments, a vector embedding for reunion search, ViT history, vault entries, gait video, and consult-share links. A record an owner will not abandon is the moat. A record that lives on one phone is not. Moving purchases and the care record onto the server is a valuation task in month 1, ahead of any new screen.

4. Potential of the mission, the build, and the products

Mission

The mission, as the product states it, is practical. An owner learns the dog's picture, sees the sources, and takes the steps an owner can take: food, treats, chews, and supplements chosen against a private standard, plus the matching protocol, and a licensed veterinarian when the situation is beyond that. Identification work sits beside the wellness work so a lost dog has a path home. The company has also reserved room to support shelters and veterans without locking a fixed percent of profit to that support.

That mission fits a paid membership and a disclosed partner catalog. It fits a shelter tool. Trust is the commercial asset. A membership people renew, and a food commission they do not resent, both depend on the company remaining obviously on the owner's side. The disclaimers already on the scan and the protocols are doing commercial work, not only legal work.

The mission does not, by itself, create urgency. Wellness education is easy to postpone. Lost-dog identification and the first week after adoption are not. The income plan uses the urgent moments as the front door and the daily protocol as the reason to stay. A shelter that hands a new adopter a free scan is distributing the product at the moment the owner is most willing to set up care. The shelter seat is in the plan because of that handoff. Its own fee is a small share of revenue.

The build

The build is ahead of the business. A solo founder already has the funnel (the scan), the content library (ten protocols and pamphlets), the record (vault and consult link), the distribution pilot (Tennessee shelters and the adoption directory), the partner scaffolding (vendor ledger, disclosure, insurance and telehealth standards), and the payment rails (card and Xaman). Most pre-revenue companies at this stage have a landing page. This one has routes a stranger can use.

The build is also uneven in a way that matters for profit. Internal studio tools for video production are further along than the cash register. The cash register is the constraint. A week spent on a new production pipeline, before a server-side purchase exists, is a week the company stays worth about what the code would cost to rebuild.

Replacement cost is the right lens for today, because there is no revenue to multiply. This plan prices the owner-facing core at $75,000. That is not a venture multiple, and it is not the sum of every internal screen. The studio, the photo booth, and the unbilled ViT Pro shell are useful options. They are assigned no dollar value until something pays for them.

Products, one by one

Product	Role in this plan	Money in the model	Decision
ViT scan	Front door. One free scan collects the email and demonstrates the product.	A few cents per scan, capped.	Keep one scan free, then membership.
Ten protocols	The library inside the membership. The reason the second year is worth paying.	Included in the $79 / $99 annual fee.	Retire $18 lifetime as the main offer.
Protocol pass	A $29, 12-month single-protocol offer for people who refuse the membership.	About 0.35 passes per new member.	Add as a side door.
Vault, gait, consult link	The record that makes renewal rational and gives a veterinarian something concrete.	Included in membership.	Move it fully onto the server account.
Label scan, training, daily log, hazards	Weekly reasons to open the app.	Included. Label scan is capped because it calls OpenAI.	Keep inside the membership.
Freedom Paws ID	The shelter's reason to say yes, and the owner's reason at a lost-dog moment.	Included for members. Shelters pay for the org tools.	Do not sell a hardware kit this year.

Product	Role in this plan	Money in the model	Decision
Shelter listings and found-dog queue	Distribution plus a software fee.	$69 a month, then $99.	Charge after a 90-day pilot.
Affiliate catalog	Highest-margin revenue that can turn on without a large new build.	A rising average per active member.	Turn links on as each contract clears the bank test.
Insurance and telehealth referrals	Spikes inside the affiliate average. One bound policy is worth more than several protocol sales.	Inside the per-member average, not added on top.	Apply early. Approval is slow.
Photo booth	Delight. The costume call has a real vendor cost and a tiny price.	Zero.	Leave the paid packs off.
Monitor guide	A setup page for a camera the owner already bought.	Zero.	Do not host video.
Xaman / XRP checkout	A second way to pay the same dollar price.	The same membership dollars, if someone uses it.	Keep the rail. Write the entitlement on the server. Do not lead with the token.
ViT Pro	A later professional product. The screen says it needs a veterinary advisor and more months.	Zero.	Do not fund it in the first 18 months.
Clinic seat on the consult packet	The add-on that can lift years 4 and 5.	Zero until clinics ask.	Spec it in year 3 only after the profit test in section 8.

The protocol pages describe utility tokens and dynamic NFTs. The checkout code takes a payment to a treasury address. It does not mint a token a buyer can hold, transfer, or show to another system. Leading with that story narrows the audience to people who already have a wallet, and it adds a disclosure burden the $99 membership does not need. Card checkout is the default. Xaman stays as an option at the same price. The educational disclaimer already in the product stays attached to anything that mentions a token.

What makes this a multi-million-dollar asset

A valuation crosses into the millions when three things are true together. A few thousand owners are on a recurring fee. A measured share of them renew. The company can show where the next owner comes from without the founder being the only source. Membership is the asset. Affiliate income is real money and is valued cheaply, because a merchant can end the program. Shelter software is the distribution proof and a second, smaller recurring line.

In the planning case those three things line up between month 30 and month 36. Membership annualized recurring revenue is about $215,000 at April 2029 and about $259,000 at October 2029. Active members are about 1,850 and then about 2,614. Paid shelters are still a minor revenue line and a major source of new owners. That mix, at the multiples in section 10, clears a million dollars of equity and then an operating value of about a million as well.

The same build, left on a one-time protocol price with dark affiliate links, does not get there on this horizon. The missing pieces are commercial. They are listed in section 8 with a month attached.

5. The offer that collects cash quickly and keeps the margin

Speed and profit point at the same structure. The variable cost of serving a member is a few dollars a year. The fee can be collected for a year on day one. An $18 lifetime fee collects too little on day one and collects nothing again. A $12 monthly fee collects slowly and creates failed-card work. The annual fee is the default.

Offer	Price	Who it is for	When it turns on
Free scan	$0, one time, email required	Every new owner	November 2026, before any ad
Founding membership	$79 per year	Buyers through February 28, 2027	December 2026
Membership	$99 per year	The standard offer	March 1, 2027
Monthly membership	$12 per month	People who will not prepay. Offered, not featured.	December 2026
Protocol pass	$29 for 12 months of one protocol	People who refuse the membership	December 2026

Offer	Price	Who it is for	When it turns on
Shelter seat, pilot	$0 for 90 days	Tennessee rescues and shelters	First pilot May 2027
Shelter seat	$69 per month, then $99 from November 2028	Orgs that finish the pilot	First paid seat November 2027

These are planning prices. They are not the prices live in the app today.

The membership includes all ten protocols, the vault, the consult packet, the training week, the daily log, care reminders, and a monthly allowance of eight ViT runs and eight label scans. The free user gets one ViT run. That cap is the profit protection on the OpenAI bill.

The model assumes new buyers take the annual plan. The monthly plan exists so a conversation does not end in a no. If ten buyers in a month take monthly instead of annual, that month's cash is lower by about $87 per buyer and the next eleven months each pick up $12. Year-one totals would come down, and later months would look smoother. Push annual at the checkout.

A 14-day refund on the annual plan is the fair rule and should be checked against the posted terms before it is shown. Refunds are not in the math. A 5 percent refund rate would shave about 5 percent off membership cash. If refunds run hotter than that, the scan is over-promising, and the copy is the thing to fix.

XRP and card are the same price. The entitlement is a row on the server either way.

Why these prices

$99 a year is $8.25 a month, inside the band owners already pay for pet apps, and it arrives as one charge. The $12 monthly price is the comparison that makes $99 the obvious choice: $144 if paid monthly, $99 if paid annually. The founding $79 is a four-month concession while the affiliate links are still lighting up. It ends. Founding members renew at $99. The 60 percent renewal assumption already includes some of them declining the step-up.

$29 for a single protocol sits above the old $18, so the floor rises, and below $99, so the membership still has somewhere to stand. The model sells 0.35 protocol passes for every new member. Those buyers are not counted as members and they do not renew.

Shelter pricing is set for a rescue budget. $69 a month is a decision a shelter manager can make without a capital campaign. $99 a month is the price once the handoff to new owners is visibly working. Twenty shelters at $99 is about $24,000 a year. That will not be the headline revenue. The headline is the owners those shelters send.

Unit economics of one member

A member who pays $99 and renews at 60 percent a year has an expected paid life of 30 months, because 12 divided by 0.40 is 30. Expected membership cash is $99 divided by 0.40, which is $247.50. Card fees at 2.9 percent plus 30 cents take roughly $8 of that across the life. Scan and label cost in the model is $0.18 a month, about $5.40 over 30 months. Affiliate contribution is modeled as an average of about $2.50 a month across the whole base, including members who never click a partner, which is about $75 over the life. Net value of a member is about $310 before the cost of finding them.

Ads in this plan are priced to buy a member at $85 in the early months, $70 through month 18, and $60 after that. A member bought at $85 against a value near $310 is a profitable purchase on day one, because the $99 arrives immediately and the ad is smaller than the fee. The limit on ads in year 1 is the $1,500 cap, and the rule that a bad ad set gets turned off.

Organic members cost founder time instead of cash. That time is priced in the economic-profit line at $6,000 a month. It is not priced in operating profit. Both lines are in section 11.

The affiliate average needs a plain anchor. At the mature rate of $4.75 per active member per month, the base is doing the work of roughly one modest product reorder a month at a commission around 10 to 15 percent, spread across members who reorder and members who do not. An insurance payout of $40 to $120 on a bound policy, and a telehealth fee of $15 to $35 on a completed consult, sit inside that average. They are not stacked on top of it. The company's own partner standards already name those ranges as targets. No carrier has agreed to them. If the first signed deal pays less, the downside case is the nearer picture.

6. Overhead

Variable cost sits outside the $1,500 cap. It is OpenAI plus card fees, and it moves with use. Overhead is everything else the company pays to stay open and to buy attention. The founder is not in overhead. The draw, once it starts, is shown under operating profit as cash leaving.

Line	Month 1	Months 2-3	Months 4-6	Months 7-18	What it is
Hosting, database, email, domain	$90	$90	$90	$160	Vercel, Supabase, Resend, the domain. Rises as vault video and email volume rise.
Legal spend	$0	$200	$200	$200	Affiliate agreements, a terms check on the new checkout, and ordinary follow-up with counsel. A month with no invoice leaves the cash unspent.
Liability insurance	$0	$0	$200	$200	Technology and professional coverage, purchased in February 2027 before ads step up. The posted terms limit liability in the contract. They do not replace a policy.
Bookkeeping	$0	$0	$75 from April	$75	A monthly close so renewal and affiliate numbers are trustworthy.
Ads	$0	$350	$700	$865	Released only under the rule in section 7.
Discretionary total	$90	$640	$1,190 to $1,265	$1,500	The cap binds from May 2027 through April 2028.

From May 2028 the hard cap comes off ads only. Tools, legal, insurance, and bookkeeping are paid at their planning amounts. Ads may rise to 20 percent of the prior month's operating profit, and they may not exceed $3,000 in a month. That extra ad money is profit being reinvested at a customer cost still well under the member's value. If the trailing cost of an ad-acquired member goes above $100, the extra spend stops and the month repeats at the prior budget.

A part-time contractor at $2,200 a month is allowed once the founder draw has started and operating profit is above $8,000 with more than $20,000 of cash on hand. The job is shelter onboarding and member email. It is not a second product builder. In the planning case the rule is met in April 2028. In the downside case it is met much later, and the model waits.

Insurance steps from $200 to $300 a month in May 2028 and to $450 in November 2029 as revenue and records grow. Legal steps down to $150 once the first wave of agreements is done. Hosting steps from $160 to $280, then $450, then $650, because gait video and consult files are the storage that will actually cost money. If storage runs ahead of that schedule, raise the tools line. Do not take an unexpected Supabase bill out of a test that is still inside its cost rule. Cut ads before cutting insurance.

Starting cash is assumed at $5,000. Formation fees and counsel already paid are sunk and are not in this plan. If the operating account holds a different balance on November 7, add the difference to every cash figure and to every equity figure. Operating profit does not change.

Founder pay

Operating profit treats the founder's labor as free. That is the right view for whether the company can pay its bills, and the wrong view for whether the company is actually making money. Economic profit charges $6,000 a month, $72,000 a year, for that labor. The $3,000 owner draw is a cash distribution once the company can spare it. It is not a second salary on top of the $6,000.

The draw rule is two consecutive months of operating profit above $5,000, and cash above $10,000. The planning case crosses that rule in February 2028. The draw then stays at $3,000. It does not rise with profit. Retained cash is what makes the later valuation sturdy, and what pays the contractor and the ads.

7. Six levels, month by month

Each level has a result the month is built to produce and the work that produces it. The figures are the planning case. One operating rule overrides the tables. Raise ad spend to the next step only when the prior month hit at least 70 percent of its new-member target and the cost of an ad-acquired member is under $100. If the rule fails, repeat the task list and hold the prior ad budget. Cash will land below the table, and the company will still be intact.

Every week, at every level: five vendor-ledger moves and no more, five shelter or rescue conversations, five public posts drawn from protocols the company has already written, a look at ad cost, a look at the OpenAI bill, and a look at cash. The ledger already forbids emailing brands it has marked hold. That instruction stands. Open Farm, Whimzees, Ruffwear, Native Pet, Walkin' Pets, Help 'Em Up, North Hound Life, and miNATURALS stay off email until a public apply path exists.

Level	When	New members	Revenue	Operating profit	Cash at end	Active members
0. Integrity	Nov 2026	0	$0	-$90	$4,910	0
1. First cash	Dec 2026 – Jan 2027	24	$2,157	$785	$5,695	24
2. Membership repeats	Feb 2027 – Apr 2027	66	$6,919	$2,976	$8,671	90
3. Owner engine	May 2027 – Oct 2027	226	$26,620	$16,458	$25,129	316
4. Shelter seats	Nov 2027 – Apr 2028	355	$52,312	$38,909	$55,037	634
5. Profit compound	May 2028 – Oct 2029	2,526	$473,912	$352,838	$353,875	2,614

Operating profit is before the owner draw. Cash is after the draw.

Level 0. Integrity. November 2026

The month is built to produce no members, no revenue, $90 of overhead, a $90 operating loss, and cash of about $4,910. The month is successful if a test payment creates a membership that appears on a second device.

1. Create the Stripe products. Founding Annual at $79. Annual at $99, hidden until March 1. Monthly at $12. Protocol Pass at $29. Add one webhook. The webhook writes the entitlement on the server, tied to the account. Run a real card test. Confirm a second device sees the purchase with no manual step.
2. Do the same for an Xaman payment. A signed payload that only sets a browser flag is not a sale.
3. Put the free scan behind an email, limit it to one run, and show the membership immediately after the result. Set the member allowance at eight ViT runs and eight label scans a month.
4. Confirm the company bank account can receive affiliate commissions. The product already keeps partner links private until that is true. Do not override that gate.
5. Start the vendor ledger at five moves a week, in its existing order. The Honest Kitchen, Pets Best, West Paw, and Vetster come first, then the next rows that are not on hold. Pets Best and Vetster are the priority conversations because a single payout there is larger than a protocol sale. Food and supplement programs are the priority for recurring commission.
6. Place the commission disclosure that already exists in the product on every page that will hold a partner link.
7. Request two quotes for technology and professional liability insurance. The policy is purchased in February, not this month.

8. Stop paid video production. HeyGen, Runway, and similar studio spend stay off. December's content is a phone clip and a paragraph taken from a protocol the company has already written.
9. Ask counsel to look at two sentences before they go on the checkout page. The 14-day annual refund, and the line that the membership is education and tools. Do not rewrite the posted terms on a whim.

Level 1. First cash. December 2026 and January 2027

Month	New	Organic	Ads	Shelters	Referrals	Renewals	Active	Revenue	Operating profit	Cash
Dec 2026	10	6	4	0	0	0	10	$906	$228	$5,138
Jan 2027	14	10	4	0	0	0	24	$1,251	$557	$5,695

December is the first month a stranger can pay. The ad budget of $350 stays locked until five real memberships have cleared. The table assumes that happens early enough in the month for the ads to run. If it does not, the organic line is the month, the $350 stays in the bank, and January picks up the same task. That outcome keeps the company intact.

December work. Turn founding checkout on. Post once each weekday where dog owners already are, using one useful step from a protocol and a link to the free scan. The post does not name a condition as something the scan has found. Write personally to 30 Tennessee shelters and rescues. The ask is a conversation and a look at the adoption directory and ID enrollment. The 90-day free seat is mentioned as something that starts in the spring.

January work. Follow up every application that has gone quiet. The moment a program approves a tracked link, and the bank gate is open, place that link on the matching protocol and nowhere else. Seven days after each purchase, send one email: one care step from the protocol they chose, and a partner link only if one is honestly relevant. Ask ten early buyers for a sentence that can be shown, with permission.

Level 2. Membership repeats. February through April 2027

Month	New	Organic	Ads	Shelters	Referrals	Renewals	Active	Revenue	Operating profit	Cash
Feb 2027	20	12	8	0	0	0	44	$1,783	$514	$6,209
Mar 2027	22	14	8	0	0	0	66	$2,460	$1,166	$7,375
Apr 2027	24	16	8	0	0	0	90	$2,676	$1,296	$8,671

February. Email everyone who has scanned or bought, in the last week of the month, and say the founding price ends February 28. Bind the insurance policy. Raise ads to $700 only if December and January together reached at least 15 memberships and the ad cost per member is under $100. Turn off any single ad set that has spent $150 and has not produced a member under $120. Open the first shelter paperwork so a pilot can go live in May, at no charge, for 90 days.

March. The $99 annual plan is the only annual plan on the page. Founding checkout is retired. Reconcile affiliate clicks against deposits once a week, even if the deposits are small. A program that cannot report has its link removed.

April. Bookkeeping starts. Read the first 90 days in one sitting: members, refunds, ad cost, OpenAI cost, and which protocol people actually buy the pass for. Put the next shelter pilot dates on a calendar. Do not add a feature. The library is already larger than the audience.

Level 3. The owner engine. May through October 2027

Month	New	Organic	Ads	Shelters	Referrals	Renewals	Active	Revenue	Operating profit	Cash
May 2027	29	18	10	1	0	0	119	$3,250	$1,609	$10,280
Jun 2027	32	20	10	1	1	0	151	$3,600	$1,941	$12,221
Jul 2027	36	22	12	1	1	0	187	$4,268	$2,585	$14,806

Month	New	Organic	Ads	Shelters	Referrals	Renewals	Active	Revenue	Operating profit	Cash
Aug 2027	41	24	12	4	1	0	228	$4,864	$3,154	$17,960
Sep 2027	43	26	12	4	1	0	271	$5,166	$3,440	$21,400
Oct 2027	45	28	12	4	1	0	316	$5,472	$3,729	$25,129

By the end of October the planning case has 316 active members, about $35,700 of revenue for the first twelve months, and about $20,100 of operating profit. Economic profit for that same year is still a loss of about $51,900, because the founder's year of work is worth more than the cash profit. That is an acceptable year. It is not a year to read as a salary.

May. The first shelter pilot is live. The shelter can enroll, list, and send a found-dog photo through the tools that already exist. Build the referral offer before the month ends. A member who brings a paying member receives a $20 credit, and the new member receives $20 off. The model does not subtract credits as their own line. If the program is popular, cap credits at $20 and let affiliate and renewal carry the difference.

June. Referrals are available in the product. The planning case counts about half of one percent of the base, not a viral loop. A second shelter pilot opens.

July. Ship care-reminder email. A member who logged a food or a supplement gets a reorder note on a sensible cadence, with the disclosed partner link. The per-member affiliate rate in the model steps up this month because this email exists. Without the email, use the downside affiliate rate.

August. A third pilot shelter. Read which two protocols produce the pass and the membership. Point the posts and the ad tests at those two. The other eight stay in the library for members.

September. Draft the paid shelter agreement at $69 a month, starting when the 90-day pilot ends. Draft the renewal email the December 2026 cohort will receive in November, 30 days before their year is up. One-click renewal. The renewal price is $99. No new discount.

October. Close year 1 on paper. Actual members against 316. Renewal is still unknown. Affiliate deposits against roughly $2,100 for the year. Ad cost per member against $70 to $85. Sign the first shelter onto the paid seat for November if the pilot produced even a handful of owner signups. If a pilot produced none, extend it once and do not invoice.

Level 4. Shelter seats. November 2027 through April 2028

Month	New	Organic	Ads	Shelters	Referrals	Renewals	Active	Revenue	Operating profit	Cash
Nov 2027	52	30	12	8	2	0	368	$6,383	$4,600	$29,729
Dec 2027	54	31	12	8	3	6	418	$7,292	$5,472	$35,200
Jan 2028	57	32	12	10	3	8	469	$8,443	$6,593	$41,793
Feb 2028	60	34	12	10	4	12	521	$9,308	$7,423	$46,217
Mar 2028	64	36	12	12	4	13	576	$10,052	$8,136	$51,353
Apr 2028	68	37	12	14	5	14	634	$10,834	$6,685	$55,037

November. Invoice the first shelter at $69. Keep two or three orgs in a free pilot so the paid count has a pipeline. The model carries three pilots from here forward. The "Shelters" column in the table is new members attributed to shelters, not the count of paying orgs. Paying orgs this month: 1.

December. The December 2026 members come up for renewal. This is the first time the 60 percent figure meets reality. The model keeps 6 of the original 10. Renew them personally while the list is small enough to write to. If renewal on this cohort is under 45 percent, freeze ad increases until the reason is known. Buying more of a product people will not renew does not fix it. The weak-renewal column later in this document is the picture that follows from 45 percent.

January and February. More shelters move to $69 as their pilots end. Paying orgs: 2 in January, 2 in February, 3 in March, 4 in April. In February the planning case meets the draw rule, and a $3,000 distribution is taken. Cash ends the month near $46,200 because the draw comes out after the operating profit. If the real February misses the rule, the founder takes nothing. The company does not borrow to pay the founder.

March. Write the contractor description. Answer member email within one business day, onboard a shelter from a checklist, and send the reminder sequence. Do not hire yet unless the profit and cash rule has already been met.

April. Fourth paid shelter. This is the last month of the hard $1,500 cap. Hire the contractor at $2,200 only if the rule is met. In the planning case, it is, which is why April's operating profit steps down from March even as revenue rises. Hand the contractor the inbox and the shelter checklist. The founder keeps ads, partner relationships, and the integrity of what the scan is allowed to say.

Level 5. Profit compound. May 2028 through October 2029

The work stops changing shape and starts repeating. The monthly ledger is in section 14. The planning case ends October 2029 with 2,614 active members, membership recurring revenue of about $259,000 a year, operating profit for the eighteen months of about $353,000, and equity of about $1,626,000, cash included.

May through July 2028. The contractor runs onboarding and the reminder inbox. Ads float under the 20 percent rule with a $3,000 ceiling. Once a week the founder reads ten scan transcripts against the disclaimer. Anything that sounds like a diagnosis gets the prompt tightened that week. This review protects the insurance and the partners.

August through October 2028. Nine paid shelters is the October target. Write the November shelter price of $99 for new agreements. Existing $69 agreements step up when they renew, not in the middle of a term. Measure renewal on the spring cohorts. If renewal has held near 60 percent, the year-3 plan stands. If it has not, switch the internal targets to the downside column and keep the price.

November 2028 through April 2029. This is the window where the planning case crosses one million dollars of equity, in April 2029, at about $1,001,000. The renewal base and the cash account have compounded. The work that makes the month true is the 30-day renewal note and the quality of the shelter-to-owner handoff. A new product line opened in this window would put both at risk.

May through October 2029. If operating profit has been above $20,000 for three straight months, write a one-page offer for a clinic seat. The consult packet the product already creates, plus a shared link, at $49 a month per clinic. Show it to five clinics. Build it only if those five say they would pay. The seat is not in the financial tables. It is the option that can make years 4 and 5 larger than this plan. ViT Pro, as a diagnostic aid for veterinarians, stays outside this offer. That is a different product, and it waits.

Where a month's new members come from

The new-member line is the sum of four sources, and each source has a ceiling.

- Organic means posts, search, and direct conversations. It starts at a handful in December 2026 and is capped near 70 a month late in the plan. A solo founder plus one contractor does not become a media company.
- Ads. Early on, a few hundred dollars buys a handful of members at $70 to $85. Later, up to $3,000 buys about 50 at $60. The plan does not assume a cheaper result.
- Shelters. A free pilot is worth about one new member a month. A paid shelter is worth about two. A shelter that sends ten a month is upside, not the plan.

- Referrals. Half of one percent of active members per month at first, rising only to about 1.2 percent. The $20 credit exists to make this small rate plausible.

At month 12 the planning split is 28 organic, 12 from ads, 4 from shelters, and 1 from referrals, 45 new members. At month 36 the split is 58 organic, 50 from ads, 50 from shelters, and 29 referrals, 187 new members, on a base of 2,614. Add the four numbers from the monthly table and see whether the month was lost on posts, on ads, on shelters, or on members not inviting members. Fix the source that missed.

8. What has to be added, and what stays out

The company does not need a new character or a new protocol library to become the asset in section 2. It needs the commercial pieces the current build left open, in this order.

1. Server-side entitlements and a Stripe webhook, plus the same write-path for Xaman. November 2026. Nothing else in this plan is safe to scale without it.
2. The membership products and the one-scan free limit. November 2026.
3. Affiliate links on the protocols that match them, under the existing disclosure, after the bank can receive the money. December 2026 through April 2027, as each program approves.
4. The day-7 care email and the reorder reminder. May through July 2027. This is the piece that turns the content library into a commission stream.
5. A $20 referral credit. June 2027.
6. A shelter invoice at $69, and a new-adopter handoff that lands on the free scan with the shelter's name attached. November 2027.
7. Renewal billing that asks 30 days ahead and charges the card the member already has, with a receipt and a one-click way to cancel. First use is November 2027.
8. A clinic seat on the consult packet, only after the year-3 profit test and five willing clinics.

These stay out of the build through at least April 2028, and several of them stay out longer.

- A paid ViT Pro product, a veterinary advisor retainer, and any screen that reads as a clinical decision tool. The foundation pages can sit. They do not get their own funded roadmap until a clinic seat, a much smaller step, has someone paying.
- Photo booth checkout. The prices can stay in the code, unpublished.
- On-chain token minting. Educational access is the product. A mint does not raise the membership fee.
- A hardware identification kit. Enrollment uses a phone the owner already holds.
- Hosted cameras. The monitor page can keep teaching people to use their own device.
- A hired production studio, a second full-time employee, and any ad budget that skips the $100 cost rule.
- Inventory. The company is not a store. Holding product would trade a gross margin near 95 percent for shipping, returns, and unsold goods.
- Any sentence, in the product or in an ad, that says the scan diagnosed a condition or that a protocol treats one.

SuperBud and the long-form video pipeline can support posts later, when a clip has a membership to point at and the cash register works. They are not a revenue line and they are not in the overhead. A data-licensing business built on biometric pet records would fight the consent the enroll flow already asks for, and it would spook the owners the membership depends on. It is excluded. The records exist to serve the owner and to get a dog home.

9. Statistics the plan is built on

Statistic	Planning figure	What would change it
Free scan to paid membership	About 8 percent, used only to size free-scan cost. About 12 free scans are served per paying member.	A weaker page raises the OpenAI line slightly. Member targets are counted directly, not derived from this rate.
Annual renewal	60 percent. First real test: December 2027.	45 percent is the weak case in section 12. Under 45 percent, ad growth stops.
Protocol passes	0.35 per new member, at $29, no renewal.	If almost everyone buys the pass and skips the membership, recurring value falls. Feature the annual plan.
Affiliate per active member	$0 through February 2027, then $0.75, $1.75, $2.75, $3.50, $4.25, and $4.75 a month at the steps in the model.	Programs are unsigned. Use the downside rate if reminders slip or the first deals pay poorly.
Ad cost per new member	$85, then $70, then $60.	Stop the extra dollar when a month prints above $100.
New members from a paid shelter	About 2 per shelter per month.	A shelter that sends none after the pilot is not invoiced.
Referral rate	0.5 percent of active members per month, rising to 1.2 percent.	If the credit is never shipped, set referrals to zero and expect the downside.
Gross margin	About 95 to 96 percent in every year of the planning case.	Breaks if scan caps come off or the company starts shipping goods.
Owner draw	$0 until February 2028 in the planning case, then $3,000 a month.	The rule in section 6 is the authority, not the calendar.
Contractor	$2,200 a month from April 2028 in the planning case.	Same: the rule, not the date.

Market size is not a driver. There are tens of millions of dog-owning households in the United States, and this plan needs a few hundred paying owners in year 1 and about 5,500 in year 5. That is a sales plan. A giant industry number would not change a task.

10. How the company is valued

On November 7, 2026 there is nothing to multiply. The figure is an asset value. $75,000 for the working owner-facing product and the formation around it, plus the $5,000 of cash the model starts with. Equity value, $80,000. No debt is assumed. No outside investor is assumed. Hours already spent are not added back. A buyer does not pay a second time for effort that is already in the code.

From month 6 onward the operating value is three lines added together.

- Membership annualized recurring revenue, times a multiple. The figure is the value of members currently inside a paid year, at the price they actually paid. Founding members still in their first year count at $79. It is not the run-rate of a single good month.
- Shelter annualized recurring revenue, times a small-company software multiple that steps up only as the org count steps up.
- Affiliate revenue, times 1. Trailing twelve months once a year of history exists. At month 6 the partial history is annualized and then cut by 30 percent, because a few months of commissions are not a contract.

Cash on hand is added after that. Equity value equals operating value plus cash. A founder who distributes the cash takes it as personal income, and the equity value falls by the same amount. The tables assume the cash stays in the company except for the $3,000 draw.

The membership multiple is 2.5 at month 6, 3.0 at months 12 and 18, 3.5 at months 24 and 30, 4.0 at months 36 and 42, 4.5 at months 48 and 54, and 5.0 at month 60. It steps up because a risk has had time to retire. A renewal cycle has been observed. A second revenue type exists. The company is no longer one unpaid person with no reserve. If renewal is actually under 50 percent, or the founder is still the only operator and the cash has been pulled out, the honest multiple stays at 3.5 or below no matter what the calendar says.

The shelter multiple is 3.0 under five paying orgs, 4.5 under fifteen, and 6.0 after that. Shelter revenue is small, so this multiple does not decide the outcome. The affiliate multiple stays at 1.0 for the entire five years. Commissions are not owned.

Through month 12 a code floor still applies, so a thin revenue multiple cannot value the company below the cash plus a shrinking slice of the code. The slice is $50,000 at month 6 and $30,000 at month 12, then zero. The floor is why month-6 equity sits near $59,000 even though the revenue math alone is about $20,000. It is also why the company can be worth less at month 6 than it was on day one. Revenue has not yet caught the replacement cost. By month 12, in the planning case, it has.

11. Valuation every six months

Three years

Month 0 is November 7, 2026. Later dates are the end of the named month.

Date	Active members	Membership ARR	Shelter ARR	Affiliate, as valued	Multiples, membership / shelter	Operating value	Cash	Equity value
Nov 2026 (start)	–	–	–	–	–	$75,000	$5,000	$80,000
Apr 2027	90	$8,000	$0	under $1,000	2.5× / 3.0×	$20,000	$9,000	$59,000
Oct 2027	316	$30,000	$0	$2,000	3.0× / 3.0×	$93,000	$25,000	$118,000
Apr 2028	634	$65,000	$3,000	$10,000	3.0× / 3.0×	$208,000	$55,000	$263,000
Oct 2028	1,136	$112,000	$7,000	$22,000	3.5× / 4.5×	$450,000	$99,000	$549,000
Apr 2029	1,850	$215,000	$19,000	$54,000	3.5× / 6.0×	$802,000	$199,000	$1,001,000
Oct 2029	2,614	$259,000	$26,000	$81,000	4.0× / 6.0×	$1,273,000	$354,000	$1,626,000

Planning case. Equity is operating value plus cash, rounded to the nearest thousand after the start date. Membership ARR at April 2027 is about $8,030 before rounding. The month-6 affiliate line is a partial year, annualized, then cut 30 percent.

Five years

Date	Active members	Operating value	Cash	Equity value
Nov 2026 (start)	–	$75,000	$5,000	$80,000
Apr 2027	90	$20,000	$9,000	$59,000
Oct 2027	316	$93,000	$25,000	$118,000
Apr 2028	634	$208,000	$55,000	$263,000
Oct 2028	1,136	$450,000	$99,000	$549,000
Apr 2029	1,850	$802,000	$199,000	$1,001,000
Oct 2029	2,614	$1,273,000	$354,000	$1,626,000
Apr 2030	3,365	$1,658,000	$577,000	$2,235,000
Oct 2030	4,105	$2,246,000	$858,000	$3,104,000
Apr 2031	4,825	$2,660,000	$1,208,000	$3,868,000
Oct 2031	5,535	$3,346,000	$1,616,000	$4,962,000

The same method, extended through October 2031. A large share of the year-5 equity is cash the company kept. The operating business by itself is about $3,346,000. Both numbers belong to the company. Only the operating number survives a full distribution of the bank account.

Reading the series in words. The company is worth about $80,000 today. Six months of execution leaves it near $59,000, still a product with a small paying handful. At one year it is about $118,000. At two years, about $549,000. The million-dollar line is crossed at thirty months. Year 3 ends near $1.63 million. Year 4 ends near $3.10 million. Year 5 ends near $4.96 million.

12. Five-year profit, loss, and value

Years run November through October. Year 1 is November 2026 through October 2027. Operating profit is revenue minus variable cost, overhead, and the contractor. It does not subtract the owner draw. Retained cash for the year is operating profit minus the draw. Economic profit subtracts $72,000 of founder labor from operating profit and does not also subtract the draw.

Year	Revenue	Variable cost	Gross profit	Gross margin	Overhead	Contractor	Operating profit	Owner draw	Retained	Economic profit	Ending cash	Ending equity
Year 1	$35,696	$1,552	$34,144	96%	$14,015	$0	$20,129	$0	$20,129	-$51,871	$25,129	$118,000
Year 2	$148,155	$6,154	$142,001	96%	$25,470	$15,400	$101,131	$27,000	$74,131	$29,131	$99,260	$549,000
Year 3	$378,067	$14,904	$363,163	96%	$46,148	$26,400	$290,615	$36,000	$254,615	$218,615	$353,875	$1,626,000
Year 4	$640,666	$23,938	$616,728	96%	$50,400	$26,400	$539,928	$36,000	$503,928	$467,928	$857,803	$3,104,000
Year 5	$905,605	$32,598	$873,007	96%	$52,800	$26,400	$793,807	$36,000	$757,807	$721,807	$1,615,610	$4,962,000

Ending equity matches the six-month table and is rounded to the nearest thousand. Ending cash is the model balance and is not rounded.

The shape is the strategy. Year 1 operating profit is a bit over $20,000, and economic profit is a loss of about $52,000. The company is learning to charge, and the founder is unpaid in the economic sense. Year 2 is the first year with a modest economic profit, about $29,000, on operating profit a bit over $100,000. Years 3, 4, and 5 are where retained cash and the renewal base compound. Overhead does not scale with revenue. That is the design. A year in which overhead starts rising in proportion to revenue is a year the plan has been left, usually by hiring ahead of the rule or by turning the studio back on.

Revenue mix

Year	Membership	Share	Protocol passes	Affiliate	Share	Shelter fees	Total
Year 1	$30,404	85%	$3,219	$2,073	6%	$0	$35,696
Year 2	$112,464	76%	$9,599	$22,435	15%	$3,657	$148,155
Year 3	$258,786	68%	$19,604	$80,570	21%	$19,107	$378,067
Year 4	$406,395	63%	$25,781	$174,632	27%	$33,858	$640,666
Year 5	$547,965	61%	$31,233	$278,293	31%	$48,114	$905,605

Membership, including renewals, is the majority of revenue in every year. That is what makes the multiple defensible. Affiliate becomes a serious second line by year 3 and is still valued at one times trailing revenue. Shelter fees remain a single-digit share. If a future year shows shelters as the growth story and membership flat, rerun section 10. The multiples are attached to the line.

Downside valuation, same dates

The downside cuts new members in half, cuts the affiliate rate in half, slows referrals, and starts paid shelters six months late. Overhead in the first eighteen months is unchanged, because the insurance, the tools, and the early ad tests still happen. Later ad spend shrinks on its own, because it is a percent of a smaller profit. The founder draw and the contractor wait for their rules.

Date	Active members	Operating value	Cash	Downside equity	Planning equity
Apr 2027	45	$10,000	$4,000	$54,000	$59,000
Oct 2027	148	$43,000	$6,000	$50,000	$118,000
Apr 2028	289	$88,000	$18,000	$106,000	$263,000
Oct 2028	439	$167,000	$39,000	$206,000	$549,000

Date	Active members	Operating value	Cash	Downside equity	Planning equity
Apr 2029	638	$278,000	$63,000	$341,000	$1,001,000
Oct 2029	886	$479,000	$90,000	$569,000	$1,626,000
Apr 2030	1,156	$636,000	$131,000	$767,000	$2,235,000
Oct 2030	1,458	$879,000	$189,000	$1,069,000	$3,104,000
Apr 2031	1,778	$1,075,000	$271,000	$1,345,000	$3,868,000
Oct 2031	2,086	$1,369,000	$373,000	$1,742,000	$4,962,000

In the downside, year-1 revenue is about $16,200 and operating profit is about $1,500. The company does not run out of the starting cash. It also does not pay the founder. Equity sits under the day-one value through the first year, then reaches about $569,000 at month 36 and about $1,742,000 at month 60. A million dollars of equity shows up around year 4. The task list does not change. The ad rule keeps spend from chasing a miss.

If renewal is 45 percent instead of 60

Holding demand at the planning level and cutting renewal to 45 percent leaves year 1 untouched, because nobody has reached a renewal yet. Month-36 equity falls from about $1,626,000 to about $1,504,000. Month-60 equity falls from about $4,962,000 to about $4,202,000. Retention matters most after the base is large. Distribution matters most before that. The December 2027 renewal cohort is the measurement that decides which column to believe.

If the price stays at $18 for life

Leaving the live offer in place means $18 once per protocol, no membership, no renewal, no affiliate line, and no shelter fee. Against the same effort and the same overhead, year-1 revenue is about $4,400 and the operating result is a loss of about $10,100. Cash ends the year near -$5,100, which means the starting $5,000 is gone and the company needs more money put in. That comparison keeps the ad budget, which would be a poor use of cash against an $18 product.

Turning the ads off, which is what a careful operator would do at that price, leaves year-1 revenue near $3,500 and an operating loss near $2,900. Cash ends near $2,100. The loss shrinks and the business does not appear. There is still no recurring revenue to multiply, so the value of the company stays in the neighborhood of the code, attached to a year of evidence that the offer does not pay the bills. This is why section 5 changes the price before section 7 spends the ad money.

13. Assumptions the whole document rests on

- One founder, full time on this company. No co-founder and no outside capital.
- Starting operating cash of $5,000 on November 7, 2026. A different balance shifts cash and equity by the same amount.
- The $1,500 discretionary cap holds from the first sale through April 2028. After that, ads can consume up to 20 percent of the prior month's operating profit, capped at $3,000, and only while ad-acquired members cost under $100.
- Annual renewal of 60 percent, paid at $99 even for founding members. First observed in December 2027.
- Affiliate programs begin producing in March 2027. The per-member rates are averages, not contracted rates.
- Card fees are 2.9 percent plus 30 cents. OpenAI is about 4.5 cents a scan and 18 cents a member-month inside the allowance.
- No sales tax analysis is included. If a state requires tax on the membership, the tax is added at checkout rather than taken out of the $99.

- The company remains an education, records, and referral business for dog owners and shelters in the United States.
- Sunk costs to date, including formation and counsel already paid, are excluded from forward profit. They show up in the asset value only inside the $75,000 replacement figure.
- The owner draw is $3,000 a month after the rule is met, and it does not rise. Economic profit separately recognizes $6,000 a month of founder labor.

Replace an assumption the month it becomes a measurement. The order is renewal rate, ad cost per member, affiliate dollars per member, and members per shelter. Those four numbers dominate the valuation. Everything else in the overhead can be wrong by a hundred dollars and the story will still hold.

14. Monthly ledger

Planning case, every month. Operating profit is before the owner draw. Cash is after the draw. Revenue includes membership, renewals, protocol passes, affiliate commissions, and shelter fees.

Year 1. November 2026 through October 2027

Month	New	Renew	Active	Membership	Passes	Affiliate	Shelter	Revenue	Variable	Overhead	Operating profit	Draw	Cash
Nov 2026	0	0	0	$0	$0	$0	$0	$0	$0	$90	-$90	$0	$4,910

Jun 2029	169	64	2,102	18	$33,917	$3,880	$2,200	$26,500	$3,000	$244,389
Jul 2029	174	70	2,229	19	$35,608	$3,880	$2,200	$28,125	$3,000	$269,514
Aug 2029	178	76	2,356	20	$37,170	$3,880	$2,200	$29,626	$3,000	$296,140
Sep 2029	183	81	2,485	21	$38,768	$3,880	$2,200	$31,161	$3,000	$324,301
Oct 2029	187	86	2,614	22	$40,239	$3,880	$2,200	$32,574	$3,000	$353,875

Shelter price steps from $69 to $99 in November 2028. Overhead from January 2029 forward includes the $3,000 ad cap, which is why the overhead line flattens at $3,880 (tools $280, legal $150, insurance $300, bookkeeping $150, ads $3,000).

Year 4. November 2029 through October 2030

Month	New	Renew	Active	Paid shelters	Revenue	Operating profit	Draw	Cash
Nov 2029	191	96	2,741	23	$44,282	$36,222	$3,000	$387,097
Dec 2029	194	106	2,864	24	$46,220	$38,090	$3,000	$422,187
Jan 2030	198	110	2,988	25	$47,667	$39,483	$3,000	$458,670
Feb 2030	202	115	3,113	26	$49,246	$41,004	$3,000	$496,674
Mar 2030	205	120	3,238	27	$50,698	$42,401	$3,000	$536,075
Apr 2030	210	126	3,365	28	$52,483	$44,121	$3,000	$577,196
May 2030	213	134	3,488	29	$54,223	$45,797	$3,000	$619,993
Jun 2030	217	140	3,612	30	$55,868	$47,382	$3,000	$664,375
Jul 2030	221	146	3,735	31	$57,509	$48,962	$3,000	$710,337
Aug 2030	225	153	3,859	32	$59,282	$50,670	$3,000	$758,008
Sep 2030	228	159	3,982	33	$60,824	$52,155	$3,000	$807,163
Oct 2030	232	164	4,105	34	$62,365	$53,640	$3,000	$857,803

Year 5. November 2030 through October 2031

Month	New	Renew	Active	Paid shelters	Revenue	Operating profit	Draw	Cash
Nov 2030	236	172	4,226	35	$66,338	$57,345	$3,000	$912,148
Dec 2030	239	179	4,344	36	$68,016	$58,964	$3,000	$968,112
Jan 2031	244	185	4,465	37	$69,808	$60,692	$3,000	$1,025,804
Feb 2031	247	189	4,584	38	$71,194	$62,029	$3,000	$1,084,833
Mar 2031	250	195	4,704	39	$72,812	$63,589	$3,000	$1,145,422
Apr 2031	255	202	4,825	40	$74,703	$65,413	$3,000	$1,207,835
May 2031	258	208	4,944	41	$76,287	$66,942	$3,000	$1,271,777
Jun 2031	262	214	5,063	42	$77,999	$68,593	$3,000	$1,337,370
Jul 2031	266	220	5,182	43	$79,682	$70,217	$3,000	$1,404,586
Aug 2031	269	226	5,299	44	$81,257	$71,736	$3,000	$1,473,322
Sep 2031	273	232	5,417	45	$82,965	$73,383	$3,000	$1,543,705
Oct 2031	277	237	5,535	46	$84,544	$74,906	$3,000	$1,615,610

Years 4 and 5 keep the same machine. One new shelter a month. Ads stay at the $3,000 cap. Organic acquisition stays near 60 to 70 a month. No second product is required for these figures. An optional lever, not in the numbers: each November, if renewal has held at 60 percent or better, raise the annual price by $10 for new members only. Existing members renew once at the price they were promised, then move to the new price.

15. Sources and limits

The product facts this plan relies on are the ones in the application on November 7, 2026. The token shop lists protocols at $18. Purchases are recorded in browser storage. Partner standards inside the product name insurance targets of 15 to 25 percent of first-year premium, or a cost per bound policy roughly in the $40 to $120 range, and telehealth fees roughly in the $15 to $35 range. Those are the company's own targets for deals it has not signed. The vendor ledger names the brands, the weekly cap of five, and the rule that a link stays private until the bank can receive a commission and the disclosure is on the page. The terms describe an educational service for adults in the United States and disclaim veterinary advice. ViT Pro is presented as foundation work. Photo booth packs are marked as not yet for sale.

This document is an operating and valuation plan for the managing member. It is not a formal appraisal, not a solvency opinion, and not advice to any outside investor. Affiliate income depends on contracts that do not exist yet. Renewal is unmeasured. The multiples are small-company ranges chosen for the risks that are actually present. A later buyer, or a later year of data, should replace them.

Prepared November 7, 2026. Horizon: November 2026 through October 2031. Review the four measured statistics in section 13 at the first renewal, in December 2027, and reset the column if the measurements disagree with the plan.
