Freedom Paws Wellness LLC

2026–2027 New Launch Roadmap

Title: 2026–2027 New Launch Roadmap

Date: November 8, 2026

Document purpose: The working sequence from the cleared Tennessee-pilot posting gate to a membership that survives a second device, public mode, the first cash, and a finished commercial build in November 2027.

Entity: Freedom Paws Wellness LLC (Wyoming), formed September 11, 2026

Production app: https://app.freedompawsinc.com (preview mode until the gate below is met)

Website: https://freedompawsinc.com (Framer)

Project folder: `freedompaws-app` / `docs/`

This roadmap supersedes the October 31, 2026 Launch Roadmap for every operating decision. The legal record, the posted-document inventory, and the October 31 phone check are carried forward below. Where an older week-by-week table, a $18 lifetime offer, a scanner-kit launch, an n8n subscription date, or a “founding 200 seats” line disagrees with this file, follow this file.

Companion bible: `(11-8-26) Freedom-Paws-Master-Business-Plan-2026-2030.md`. Prices, member counts, and profit figures in this roadmap are the planning case from that bible. They are targets, not promises.

Not legal, tax, financial, or veterinary advice. Bass, Berry & Sims did not guarantee sufficiency and did not give governmental approval. This file does not, by itself, open selling. Selling opens when the EIN exists, the bank is open, and a membership appears on a second device.

Advisor’s opening

This is the right plan for a durable company. It is not the plan that produces a mega company.

A mega outcome here would mean a default tool for shelters and owners across the country, with a team that no longer depends on you and a value well beyond the roughly $3 million at month 48 in the planning case. This plan is built to reach a real, profitable membership business on one person’s time and a $1,500 monthly cap. That is a serious success. It is a different assignment from “mega.”

Why this sequence is the best one you can run under the rules you set. You have a wide product, no customers, and a legal ceiling that forbids diagnosis. The cash register has to exist before ads, or you will pay to acquire people you cannot recognize on a second phone. The annual membership is the only offer in the current product that can compound. Affiliates are extra margin, not the company. The shelter seat is the distribution door, and its fee is the small line. SuperBud, the photo booth, a scanner you stock, and ViT Pro all spend time or cash before they create a second-year renewal. Leaving them dark is the scale decision, not a delay of it.

The one place the plan is too small, if the product is actually good. The booked rate is about two new members per paid shelter per month. The mechanism you described — every incoming dog enrolled at intake, the adopter claiming that record — is the only path in this company that can beat ads. A municipal shelter that adopts out 40 dogs a month and gets one in four adopters to claim the record is ten members a month from one organization. That is the mega wedge, and it is unmeasured. Until one Tennessee shelter, municipal or rescue, runs that loop for 90 days, every national number in the plan is a story. If the claim rate is real, the plan should be rewritten upward and the first hire should be someone who onboards shelters, not someone who makes more product. If the claim rate is near zero, no amount of SuperBud or hardware will scale it, and the membership-plus-small-ads path is the whole company.

What not to do in the name of scale. Do not raise money before that 90-day claim rate exists. Capital spent on ads, a studio, or a scanner inventory would buy a bigger version of a loop you have not seen work. Do not add a medical claim to chase a grant or a higher price. The companies that become large in pet health either own the clinic relationship or own a device people already wear. You own a record and a handoff. That can be large. It becomes fragile the moment the scan is sold as a diagnosis.

The best scaled approach, stated as a rule: finish the membership so a stranger can pay, then put every spare week into one shelter’s intake-to-claim rate. Scale shelters only after that rate is real. Keep the rest of the plan exactly as written until that number comes in. Mega, if it is available to this company at all, starts there. It does not start with a bigger build.

How to use this roadmap

One founder does the work. Hours on each line are that person's time. Waiting on the IRS, a bank, counsel, or an affiliate program is calendar time and is labeled as a wait.

If the EIN or the bank slips, slide every later date by the same number of weeks. Do not catch up by turning ads on early.

The build in this roadmap ends in November 2027: a shelter can be invoiced, an adopter can claim a dog that was enrolled at intake, and a membership renews on the card already on file. After that, the work repeats. New product lines are not how the next year is won.

About **55 hours** fall in the rest of November 2026. About **160 hours** of product work fall between November 8, 2026 and November 2027. From December 2026 on, the weekly rhythm is about **8 hours** and sits on top of those project hours.

Status carried forward from October 31, 2026

L5 / 0B.4 posting gate: cleared October 28, 2026. Bass's word is **final** for the Tennessee pilot. Bass will not say **approved**. There is no separate approval PDF. The founder accepted the return, including the jury waiver, and did not send more feedback.

Posted set, still the live set on November 8, 2026:

Item	What is live
Terms	October 26, 2026 file. Date line “Last updated October 26, 2026.”
Privacy	October 26, 2026 file. Date line set by the founder to “Last updated and effective as of October 28, 2026.” Counsel’s file said October 26.
Phone	(629) 206-4430 in each document.
Address	30 North Gould Street, Suite R, Sheridan, WY 82801. Kept.
Arbitration and class-action waiver	Gone.
Jury waiver	Kept, including the unedited sentence “these Terms of your use of the Site.”
Biometric consent	Version 2026-10-14.
Diagnostics disclaimer	October 14, 2026.
DPA outline	October 14 file. It is not a public page.
10% give-back	Off Terms, off Token Shop checkout, and off the Token Shop landing page. It stays off.

Phase 1 boxes 1.1, 1.2, and 1.3 are done. Box 1.4, the production phone check of enroll consent and one urgent ViT result, passed on October 31, 2026. The record is at the end of this roadmap.

Still open on November 8, 2026: EIN, company bank, founder-advance booking, Stripe into the LLC, a server entitlement, `NEXT_PUBLIC_SITE_MODE=public`, shelter conversations, affiliate links, and the membership offer itself. The $18 lifetime protocol is still the price in the shop. This roadmap retires it as the offer before any ad dollar is spent.

Production deploy recorded October 31, 2026: commit `59e9eef`, “Fix the sign-in confirm build error,” Ready. Sign-in that worked was the email link plus the Finish sign-in Continue button.

Already built, and not on this roadmap as new work: ViT, ten protocols, the vault, the consult link, label scan, the training week, the daily log, the hazard list, Freedom Paws ID enrollment, found-dog intake, the shelter dashboard, chip-number entry for a logged-in user, the Tennessee adoption directory, partner-standard pages, and a Stripe session that does not yet write a server entitlement.

What changed from the October 31 sequence

The October 31 roadmap was still opening the company, then treating a protocol unlock and one shelter email as the launch. Four decisions replace that.

1. The product for sale is an annual membership. Founding price is **$79** through February 28, 2027. The standard price is **$99** from March 1, 2027. A **$12** monthly plan exists and is not featured. A **$29** pass covers one protocol for 12 months for someone who refuses the membership. The **$18 lifetime** price stops being the offer.
2. A payment is finished only when a second device shows the membership with no manual step. A browser flag set from the success URL is not a sale. Xaman writes the same server row. Card is the default.
3. Shelters and rescues, municipal and private, are the distribution door. Tennessee is first because the directory and the found-dog queue are built there. The seat fee is small. The build that matters is enrolling the dog at intake and having the adopter claim that record. A hardware scanner is not part of this launch.
4. SuperBud may host five posts a week that point at the free scan. Paid HeyGen, Runway, and similar studio spend stay off. The photo booth stays unpublished.

What holds public mode

Public mode is the Vercel setting `NEXT_PUBLIC_SITE_MODE=public`. It allows search indexing and removes the preview banner. Preview mode disallows all robots and shows “Private preview — not indexed.”

Counsel is no longer what holds that switch. The October 26 note says selling, public mode, and the shop wait for the founder’s notice that the EIN is opened and the bank account is open. That notice has not been given.

Besides the EIN and the bank, public mode waits on these:

1. A **$1 Stripe charge that lands in the Freedom Paws Wellness LLC account.** A test charge must not hit a personal account.
2. A **membership that works on a second device**, written by the webhook, tied to the account. This replaces the October 31 line that accepted “a membership or one protocol unlock.” A protocol flag in the browser does not pass.
3. A **Framer check** the same week. Before the membership is live, every button lands on a free job: watch, share, the free scan, or enroll. After the second-device test passes, the membership checkout may be linked. Affiliate links stay off. The 10% sentence stays off.
4. The **founder notice** that the EIN and the bank are actually open. The clerk note does not open public mode by itself.

5. The **iPhone photo path.** On October 31, 2026, Direct Upload and `/vit-upload.html` completed the upload and then could not load the photo, because Vercel temporary storage is not shared across instances. The dashed-box upload that reads the file in the browser worked. A public ViT invite uses that path.

Do not flip the switch on the day the bank login arrives. Flip it after the $1 is in the LLC and the second-device membership works. That flip is planned for December 2026, in the same week founding checkout turns on.

What each effort may do

Effort	May do now	Waits for
Posts and SuperBud	Five pieces a week from protocols already written. Education only. Close on the free scan. Health pieces tell the owner to call their own veterinarian.	Paid studio tools stay off. No shop link, affiliate link, 10% line, reunion rate, or diagnosis until the matching gate below is open. A membership link waits for the second-device test.
AAHA	One registry question to petmicrochiplookup@aaha.org. No endorsement and no partnership claim.	Do not order scanner kits from this email or from any later email in this roadmap.
Vendor acquisition	Five ledger moves a week, in the existing order. Honest Kitchen, Pets Best, West Paw, and Vetster come first. Publish nothing.	A tracked link goes on the matching protocol only after the bank can receive the commission and the disclosure is on the page. Brands on hold stay off email: Open Farm, Whimzees, Ruffwear, Native Pet, Walkin' Pets, Help 'Em Up, North Hound Life, miNATURALS.
Shelter conversations	Draft, then send personal notes. Municipal shelters and private rescues are both in scope.	Thirty Tennessee notes go out in December, after public mode, from shelter@. The first free 90-day pilot is paperwork in February and a live seat in May.
Grants	The RippleX invitation form may be sent in November with a checkout demo. Count $0.	Petco Love, PetSmart Charities, and Maddie's Fund pay shelters, not this LLC. A shelter applies, if it chooses, after it has a live listing. Do not file a research grant that calls the scan a diagnosis.
EIN	Apply at irs.gov. Responsible party **Michael Kevin Corey**. Wyoming LLC.	CP 575 saved before the bank. About 1 hour, then an IRS wait that is often one to four weeks.
Bank	Open it after the EIN.	Account titled **Freedom Paws Wellness LLC**. Then book founder advances. Confirm it can receive an affiliate commission. About 2 hours, plus the bank's wait.

Weekly rhythm, from December 2026 through November 2027

- Five vendor-ledger moves and no more. About 2.5 hours.
- Five shelter or rescue conversations. About 2.5 hours.
- Five public posts. One useful step from a protocol. SuperBud may host. The post does not say the scan found a condition. About 2.5 hours.
- Ad cost, the OpenAI bill, and cash. About 30 minutes.

Raise ad spend to the next step only when the prior month hit at least 70 percent of its new-member target and an ad-acquired member cost under $100. If the rule fails, repeat the task list and hold the prior ad budget.

November 8–30, 2026 — the cash register

The month is successful with zero members and zero ad spend, if a real card payment creates a membership that a second device can see. Overhead in the plan is about $90. Cash ends near $4,910 if the account started at $5,000. A different starting balance moves cash by the same amount. It does not change the work.

- [ ] File the EIN. About 1 hour. Save the CP 575. IRS wait, often 1–4 weeks.
- [ ] Open the LLC bank account. About 2 hours, plus the bank’s wait. Book founder advances as reimbursement or as capital. Optional 30-minute CPA note on startup costs. Calendar the Wyoming annual report.
- [ ] Confirm the account can receive an affiliate commission. About 30 minutes. This gate stays closed in the product until it is true.
- [ ] Create Stripe products: Founding Annual $79, Annual $99 hidden until March 1, 2027, Monthly $12, Protocol Pass $29. About 3 hours.
- [ ] Add one Stripe webhook that writes the entitlement on the server, tied to the account. Remove the unlock that fires from the success URL alone. About 16 hours.
- [ ] Take a live $1 payment into the LLC, then confirm a real membership price on a second device with no manual step. About 3 hours.
- [ ] Give an Xaman payment the same server write. A signed payload that only sets a browser flag is not a sale. About 10 hours.
- [ ] Put the free ViT scan behind an email. Limit a free account to one run. Show the membership immediately after the result. Set the member allowance at eight ViT runs and eight label scans a month. About 10 hours.
- [ ] Point the public photo path at the in-browser upload that worked on October 31. About 6 hours.

- [ ] Make the annual membership the offer on the shop page. Leave $18 lifetime off the primary button. About 6 hours.
- [ ] Place the commission disclosure that already exists in the product on every page that will hold a partner link. About 3 hours.
- [ ] Ask counsel to look at two sentences before they go on the checkout page: a 14-day refund on the annual plan, and the line that the membership is education and tools. About 1 hour to send. Do not rewrite the posted terms beyond those two sentences. Counsel's review is their clock.
- [ ] Request two quotes for technology and professional liability insurance. About 2 hours. Buy the policy in February, not this month.
- [ ] Send the RippleX invitation form with a demo of membership checkout, including Xaman, and a one-page note that the milestone is server entitlements and on-ledger settlement of the same price. About 2 hours. Count $0. Ask XRPL Commons when the next Aquarium cohort opens. About 30 minutes.
- [ ] Stop paid video production. Same-day decision. December's content is a phone clip and a paragraph from a protocol already written.

Done when: the second device shows the membership, the free scan is capped, and the shop leads with the annual plan.

December 2026 — first cash

Planning case: 10 new members, about $906 of revenue, about $228 of operating profit, cash near $5,138. Ads of $350 stay locked until five real memberships have cleared. If they have not, December is the organic line only and January picks up the ads.

- [ ] Turn founding checkout on. Set `NEXT_PUBLIC_SITE_MODE=public` only after the $1 is in the LLC and the second-device test has passed. About 1 hour.
- [ ] Audit Framer. Free jobs until checkout is honestly live, then the membership may be linked. No affiliate button. No 10% line. Run the six-tap iPhone check on the free scan. About 2 hours.
- [ ] Post once each weekday inside the weekly rhythm. About 2.5 hours a week.
- [ ] Write personally to 30 Tennessee shelters and rescues, municipal and private. The ask is a conversation and a look at the adoption directory and ID enrollment. Mention the 90-day free seat that starts in May. Send from shelter@. Log each note. This replaces the single "Email 1, then stop" rule. It is not a mail merge and it is not n8n. About 8 hours across the month.
- [ ] Keep five vendor moves a week. Pets Best and Vetster are the priority conversations because one payout is larger than a protocol sale.

Done when: a stranger can pay, five memberships have cleared before any ad dollar, and the 30 notes are logged.

January 2027 — links that have actually been approved

Planning case: 14 new members, 24 active, about $1,251 of revenue, about $557 of operating profit, cash near $5,695.

- [ ] Follow up every affiliate application that has gone quiet. About 2 hours.
- [ ] The week a program approves a tracked link, and the bank gate is open, place that link on the matching protocol and nowhere else. About 1 hour per program.
- [ ] Seven days after each purchase, send one email: one care step from the protocol they use, and a partner link only when one is honestly relevant. About 4 hours to set the template, then a few minutes per member.
- [ ] Ask ten early buyers for one sentence that can be shown, with permission. About 2 hours.

Done when: every live link has a disclosure, a tracking URL, and a deposit path. A program that cannot be tracked is not on the page.

February 2027 — founding price ends

Planning case: 20 new members, 44 active, about $1,783 of revenue, about $514 of operating profit, cash near $6,209.

- [ ] In the last week of the month, email everyone who has scanned or bought and say the founding price ends February 28. About 2 hours.
- [ ] Bind the technology and professional liability policy. About 2 hours, plus the insurer’s clock. The plan carries $200 a month from this month. The posted terms limit liability in the contract. They do not replace a policy.
- [ ] Raise ads from $350 to $700 only if December and January together reached at least 15 memberships and the ad cost per member is under $100. Turn off any single ad set that has spent $150 and has not produced a member under $120. About 2 hours.
- [ ] Open paperwork for the first shelter pilot, at no charge, for 90 days, aimed at a May start. Municipal or rescue. About 4 hours.

Done when: the founding price has an end date in the inbox, the policy is bound or the quote is refused in writing, and one shelter has a pilot date.

March 2027 — one annual price

Planning case: 22 new members, 66 active, about $2,460 of revenue, about $1,166 of operating profit, cash near $7,375. Affiliate deposits in the model begin this month, about $50, and only if a real program is approved. If none is approved, the month is still a success on membership alone.

- [ ] On March 1, make $99 the only annual plan on the page. Retire founding checkout. About 2 hours.
- [ ] Reconcile affiliate clicks against deposits once a week. About 30 minutes a week. Remove a program that cannot report.

Done when: a new buyer cannot still check out at $79.

April 2027 — read the first 90 days

Planning case: 24 new members, 90 active, about $2,676 of revenue, about $1,296 of operating profit, cash near $8,671.

- [ ] Start a monthly bookkeeping close. About 3 hours to set up, then about 2 hours a month.
- [ ] Read members, refunds, ad cost, OpenAI cost, and which protocol people buy the pass for. About 3 hours.
- [ ] Put the next shelter pilot dates on a calendar. About 1 hour.
- [ ] Add no feature. The library is already larger than the audience.

Done when: the 90-day note is written down, including the one number that missed.

May 2027 — enroll the dog at intake

Planning case: 29 new members, 119 active, about $3,250 of revenue, about $1,609 of operating profit, cash near $10,280. One of those new members is attributed to the shelter. That is the counted rate for a free pilot: about one new member a month. A shelter that sends ten is upside, and it changes the forecast only after it is measured.

This is the build that makes a shelter worth using on every dog that comes in. The dog is enrolled at intake, before there is an owner account. At adoption, the new owner claims that record and lands on the free scan with the shelter’s name attached. A chip number can be typed from the reader the shelter already owns. Phones cannot read an implanted chip. A Freedom Paws hardware kit is not required, is not priced for sale, and is not ordered.

- [ ] Go live with the first pilot on the tools that already exist: enroll, list, and a found-dog photo. About 6 hours with the shelter.
- [ ] Build the intake-to-adopter claim. About 24 hours.
- [ ] Build the $20 referral credit. The member who brings a paying member receives $20, and the new member receives $20 off. Cap credits at $20 if the program is popular. About 12 hours. It turns on in June.

Done when: one shelter can create a dog with no owner, and a test adopter can claim it onto an account.

June 2027 — referrals on, second pilot

Planning case: 32 new members, 151 active, about $3,600 of revenue, about $1,941 of operating profit.

- [ ] Turn the referral credit on and run it against two real accounts. About 2 hours.
- [ ] Open a second shelter pilot, municipal or rescue. About 6 hours.

July 2027 — the reorder note

Planning case: 36 new members, 187 active, about $4,268 of revenue. The affiliate line in the model steps up this month because this email exists. If the email slips, use the downside affiliate rate until it is live.

- [ ] Ship the care-reminder email through Resend. A member who logged a food or a supplement gets a reorder note on a sensible cadence, with the disclosed partner link. About 16 hours. Leave n8n off unless volume makes a manual send unreasonable.

August 2027 — aim the posts

Planning case: 41 new members, 228 active, about $4,864 of revenue.

- [ ] Open a third pilot shelter. About 6 hours.
- [ ] Read which two protocols produce the pass and the membership. Point posts and ad tests at those two. The other eight stay in the library for members. About 3 hours.

September 2027 — the paid seat and the renewal note

Planning case: 43 new members, 271 active, about $5,166 of revenue.

- [ ] Draft the paid shelter agreement at $69 a month, starting when that organization’s 90-day pilot ends. About 4 hours. Send it to counsel if the draft needs a review. Their clock is separate.
- [ ] Draft the renewal email the December 2026 cohort receives in November, 30 days before the year is up. One-click renewal at $99. No new discount. About 3 hours of copy.

October 2027 — close year 1 on paper

Planning case for the full year, November 2026 through October 2027: about $35,700 of revenue, about $20,100 of operating profit, 316 active members, cash near $25,129. Economic profit for the year is still a loss of about $52,000, because the founder’s labor is charged at $6,000 a month in that second view. The company can pay its bills. It has not yet paid the founder.

- [ ] Compare actual members with 316, affiliate deposits with about $2,100, and ad cost per member with $70 to $85. About 3 hours. Write down the miss.
- [ ] Sign the first shelter onto the paid seat for November if the pilot produced even a handful of owner signups. If it produced none, extend the pilot once and do not invoice. About 2 hours.
- [ ] Finish renewal billing: ask 30 days ahead, charge the card already on file, send a receipt, and offer a one-click cancel. About 16 hours. First use is November.

November 2027 — the launch build is complete

Planning case: 52 new members, 368 active, 1 paid shelter, about $6,383 of revenue, about $4,600 of operating profit, cash near $29,729.

- [ ] Invoice the first shelter at $69. Keep two or three organizations in a free pilot so the next paid seats have a pipeline. About 3 hours.
- [ ] Confirm the intake claim on one real adoption, with the shelter’s name on the free scan. About 2 hours.
- [ ] Confirm the December renewal schedule is armed. About 1 hour.

Product work for this launch ends here. December 2027 through April 2028 are in the master plan: renew the first cohort personally, move pilots to $69 as they end, and hire a $2,200 contractor only when the draw has started, operating profit is above $8,000, and cash is above $20,000.

Leave closed

Closed	Until
Public mode	The $1 is in the LLC, the membership works on a second device, and Framer has been checked.
Ad spend	Five real memberships have cleared. Then $350, and only inside the cost rule.
$18 lifetime as the primary offer	Retired in November 2026, before ads.
Affiliate links	Bank, disclosure, and a tracked URL. Then the matching protocol only.
10% sentence	Stays off the site. A planning reserve in a spreadsheet does not put the sentence on a page.
Reunion-rate and diagnosis claims	They are not a video closer, not an ad, and not a grant sentence.
Paid HeyGen, Runway, and studio production	Off through this roadmap. Phone clips only.
Photo-booth checkout	Packs stay unpublished. The costume call has a real vendor cost.
ViT Pro billing and any clinical decision screen	Out through at least April 2028. A clinic seat on the consult packet is a year-3 test in the master plan, and only if five clinics say they would pay.
Scanner-kit inventory	Out of this launch. Enrollment uses the phone the owner already holds and, at a shelter, the reader the shelter already owns.
Token minting	Educational access is the product. A mint does not raise the fee.
n8n Cloud Starter	Not required for the day-7 note or the reorder note. Revisit only when manual sends are failing.
Hosted cameras	The monitor page can keep teaching people to use their own device.
California foreign LLC	Not required by living in California while the company is not operating there.
A second full-time employee	Out. One contractor is a rule in the master plan, not a date on this roadmap.
Research grants framed as diagnosis	Do not file.

Later notice — veterinarian visit link

Open this when you are ready to finish the vault-share check. Do the SQL first, then the app check. The programming was already on production as of the October 31 roadmap (`05751f2`). Nothing else needs a push for this check. It is not on the critical path to the first membership.

Part A — SQL, once. About 20 minutes.

1. Open https://supabase.com/dashboard and sign in.
2. Open the project **freedom-paws-id**.
3. In the left sidebar, click **SQL Editor**.
4. Click **New query**.
5. Paste this whole script.

```
 alter table public.pet_vault_entries drop constraint if exists
pet_vault_entries_kind_check;

alter table public.pet_vault_entries
  add constraint pet_vault_entries_kind_check
  check (kind in ('vet_record', 'vaccination', 'daily_note', 'gait_clip'));

alter table public.pet_vault_entries
  add column if not exists storage_path text;

insert into storage.buckets (id, name, public, file_size_limit, allowed_mime_types)
values (
  'pet-vault-media',
  'pet-vault-media',
  false,
  26214400,
  array['video/mp4', 'video/quicktime', 'video/webm']
)
on conflict (id) do update
set
  public = false,
  file_size_limit = excluded.file_size_limit,
  allowed_mime_types = excluded.allowed_mime_types;

create table if not exists public.pet_vault_shares (
  token text primary key,
  pet_id uuid not null references public.pets(id) on delete cascade,
  owner_id uuid not null references auth.users(id) on delete cascade,
  expires_at timestamptz not null,
  created_at timestamptz not null default now()
);

alter table public.pet_vault_shares enable row level security;
```

1. Click **Run**.

2. The result should say **Success** with no red error. Run it once. If the bucket lines are the only error, delete those lines, run the rest, then in the left sidebar open **Storage**, choose **New bucket**, name it `pet-vault-media`, leave it private, and set the file limit to 25 MB.

Part B — app check. About 20 minutes.

1. Open https://app.freedompawsinc.com.
2. Sign in with the owner account.
3. Open **My Pets** and open one dog. Add one picture and one short note on the vault if that dog does not have them yet.
4. Save a short walking video on that dog.
5. Tap **Create veterinarian link**.
6. Tap **Copy link**.
7. Open a private window, paste the link, and leave the owner signed out of that window.
8. Pass when the page shows the notes, the pictures, and the walking video. A PDF saved as a file name only shows the name.

Phone check recorded October 31, 2026

Production, after deploy `59e9eef`. Carried forward so the next phone check has a baseline.

ID enroll. A new pet reopened consent step 2. The checkbox was left empty. The page showed **Consent version 2026-10-14.** A pet that had already consented skips step 2. That skip is expected.

Urgent ViT. The test string “blue gums and pale gums” raised the red banner. Title: **Prompt attention required.** Body: the counsel default. No condition name and no match or congruency percent on the red banner. “How we matched” starts with the counsel sentence. The vision paragraph can still say “potential cyanosis.” That sentence is the model’s own words inside the match note. It is a leftover. It is not a failed banner check. The weekly transcript review in the master plan is where leftovers of that kind get tightened.

Photo path used for the check. The dashed box that reads the file in the browser. Direct Upload and the backup link `/vit-upload.html` returned “Upload completed but photo could not be loaded” because the file was written to temporary storage that the next request could not see.

Sign-in path that worked. The email link, then Continue on the Finish sign-in page. A six-digit code can fail if the mail app has already used the token. Leave the link untapped if you are typing the code.

What success looks like at each gate

Gate	Pass
November 2026	Second device shows a membership. Free scan is one run. Shop leads with annual.
December 2026	A stranger has paid. Ads are still off until five memberships, or they are on and under $100 a member.
February 28, 2027	Founding price is over. Insurance is bound.
May 2027	One shelter can enroll a dog at intake and a test owner can claim it.
July 2027	A reorder note goes out with a disclosure, or the affiliate target is cut to the downside.
October 2027	Year 1 is written down against 316 members, about $2,100 of affiliate deposits, and a $70–$85 ad cost. The miss is named.
November 2027	One shelter is invoiced at $69. Renewal billing is armed.

The four numbers that can retire a target are, in order: renewal rate, ad cost per member, affiliate dollars per member, and members per shelter. Replace the assumption in the month it becomes a measurement.

Source map

Source	What this roadmap takes from it
October 31, 2026 Launch Roadmap	Posted-set inventory, counsel status, phone check, veterinarian-link steps, EIN responsible party, addresses, and the public-mode definition. The selling sequence in that file is retired.
October 26 counsel note	Posting gate cleared October 28, 2026. “Final,” not “approved.” Selling, public mode, and the shop wait for the founder’s notice that the EIN and the bank are open.
November 7, 2026 Valuation and Income Plan	Prices, the membership offer, the shelter handoff, the ad rule, the hours, and the planning-case month targets.
November 8, 2026 Master Business Plan	The bible. This roadmap is the 14-month execution extract. If they ever disagree, the master plan wins, and this file is corrected the same week.
